

Faizan Farhad

Aspiring AI/ML Engineer

faizanfarhad2211@gmail.com | +91 9310905797 | Narela, Delhi

[Linkdlen](#) | [GitHub](#) | [PortFolio](#)

PROFILE

BCA student and aspiring AI/ML engineer focused on NLP, RAG systems, text-to-SQL applications, and AI-powered automation. Experienced in building practical machine learning applications using Python, PyTorch, Hugging Face, Playwright, and OpenCV

EDUCATION

BCA | CPJ College
2024 – 2028(Expected) | Narela, Delhi

SKILLS

- **Languages:** Python (Proficient), Java (Familiar)
- **Machine Learning:** Scikit-Learn, Classification Modeling
- **Data Stack & Tools:** Pandas, NumPy, Git & GitHub, APIs
- **Agentic AI & LLMs:** Playwright, Prompt Engineering
- **NLP:** Text Preprocessing, Feature Engineering, Tokenization
- **Deep Learning:** PyTorch, CNN, Neural Networks

LANGUAGES

- Hindi
- English

PROJECTS

BrowserAutomationAgent

Sep 2026 – Oct 2026

- Engineered an LLM-driven browser automation agent that converts natural-language tasks into structured action plans and executes them through Playwright.
- Designed a planner–validator–executor architecture with bounded replanning, validating generated actions against live browser state before execution and using DOM observations to recover from invalid plans.
- Implemented API-first execution with direct HTTP requests for supported read-only operations, alongside browser-based actions such as navigation, clicking, form filling, extraction, and file downloads.
- Built persistent browser-session support, durable execution state tracking, structured plan storage, and Gmail OAuth integration for automated email workflows.

Tech Stack: Python, Playwright, LLMs, Ollama, HTTPX, Gmail API, OAuth, JSON

QueryCraft—Plain English to SQL

Aug 2026 – Sep 2026

- Developed a schema-aware natural-language-to-SQL system that converts plain-English database requests into executable SQL queries.
- Designed prompt-driven SQL generation using database schema context to reduce hallucinated tables and columns and improve query reliability.
- Implemented conversational query handling with database execution, enabling users to interact with relational data without writing SQL.
- Added database-dialect awareness and structured query generation to support different SQL environments and maintain executable output.

Tech Stack: Python, LLMs, SQL, SQLite, Prompt Engineering, Pandas

COURSES

AI/ML | Daksh Gurukul (IIT Guwahati)

June 2025 – Oct 2026

- **Acquiring** deep theoretical foundations and practical applications in AI/ML principles, deep learning frameworks, and predictive modeling techniques to solve real-world problems.
